

Challenges in Ecosystem Modeling and Decision Making

- Objectives – Solicit District experiences in multi-project and large scale water resource management activities with emphasis on decision making and models used.
- Determine common themes, tools, general gaps, and specific needs.
- Provide guidance for the development of Decision Support Technologies

Steve Ashby, PhD

General Problem

- The Nation's water resources are effected by watershed and CE activities
- Technologies for system-wide assessments for sustainable management are not readily available
- A corporate approach is need for defensible decision making and application of decision support technologies
