Flood&Coastal Storm Damage Reduction R&D Program

Flood Risk Management Newsletter

Description

The Flood Risk Management (FRM) Newsletter is intended to be a primary communication tool for the entire FRM community. The newsletter covers all aspects of FRM, including geotechnology; hydrology; hydraulics; coastal engineering; ice engineering; material science; mechanical engineering; planning and policy; and research and development. Generally each issue will highlight a specific Major Subordinate Command/Research and Development (MSC/R&D) national interest. The newsletter should be of interest and of use to those in the following business areas: water allocation; shore protection; emergency response; planning; dam safety; levee safety; ecosystems; and recreation.

Benefits

This newsletter is available on the FRM Gateway through a subscription service at no cost. It is intended to provide the entire FRM community, quarterly, insight to the issue's focus as well as to recent publications, upcoming conferences, training and workshops and interesting links. It is also hoped that the newsletter will help the community become more familiar with the wealth of information available on the FRM Gateway.

Status

It will be published quarterly. The first issue was published in October 2007. Each issue of the FRM Newsletter will be announced through an automated distribution. Also listed on the Web site is the list of focus topics for upcoming issues.

Distribution Source(s)

To subscribe to the newsletter, go to <http://operations.usace.army.mil/flood.cfm>, and click on 'subscribe' under 'FRM Newsletter.' Archived issues are also available at that site.

Application

The newsletter editors welcome articles, links, conference announcements and other items of interest for upcoming issues. Submissions should be made to the Canvassing Editor, Doyle Jones, at Doyle.L.Jones@usace.army.mil.
